

PHIL 321
Lecture 7: Plato's *Meno* (up to 86c)

9/19/2013

Clearing up a mistake from last lecture

Hedonism: Any view that holds pleasure to be good (versions differ in holding pleasure to be *a* good, *the* good, and so on) (so, hedonism is a theory of what is of value (an “axiology”))

Consequentialism: Any view that accepts the following bi-conditional: *X* is right/obligatory if and only if and because *X* maximizes value (So, consequentialism is a “theory of rightness” or “theory of obligation”)

Utilitarianism: A consequentialist view that holds “utility” to be what is of value (i.e. *X* is right/obligatory if and only if and because *X* maximizes utility)

So, hedonic consequentialism is any view that accepts: *X* is right/obligatory if and only if and because *X* maximizes pleasure

- Different hedonic consequentialist theories will differ over what/whose “pleasure” is to be maximized (e.g. one's own pleasure, the total amount of pleasure in the world, etc.)

The priority of definition

If you don't know what something is, you can't know what qualities it has—i.e. you can't know anything else about it (71b3-4)

In other words, knowing whether *X* is *F* is epistemically *posterior* to knowing what *X* is

- So, knowing what virtue is is a necessary condition for knowing whether virtue is teachable. Thus, Socrates and Meno turn their attention to determining what virtue is.

What conception of knowledge might make this plausible?

The paradox of inquiry

Meno's version: He asks, first, “How will you look for it [the nature of virtue] when you do not know at all what it is?” And then presents something like a dilemma:

Grube translation of 80d5-7: “How will you aim to search for something you do not know at all? If you should meet with it, how will you know that this is the thing that you did not know?”

Alternative translation: “Which among the things you do not know [to be virtue] will you put before you to investigate? Or, if you happened to encounter it [the nature of virtue], how will you know that this is it, that thing which you did not know?”

Socrates' version

- [1] Inquiry is impossible

- [2] If X knows, there is no point in searching (since X knows it already)
- [3] If X doesn't know, X cannot search (since X doesn't know what to search for)
 - What suppressed premise is necessary to make [2], [3] → [1] a valid argument?

What is the relationship between Meno's version and Socrates' version?

Socrates' response: Recollection and the Exchange with Meno's slave

Plato clearly takes the paradox seriously, but which premise of the dilemma does he reject?

- [R] Learning is recollection—which seems to reject [2]: you *already* knew and *later* recollect
- [E] The elenchus of the slave—which seems to reject [3]: the slave didn't know and now does (or will after further questioning)
- Perhaps he rejects [2] and [3]: There is a sense in which you can know (i.e. latently) but still have successful inquiry (by recollecting) (i.e. 2 is false) and there is a sense in which you don't know (i.e. explicitly) and can still have successful inquiry (i.e. in an exchange such as the one with Meno's slave)

S claims that the slave:

- [A] Has not learned geometry before
- [B] Was not taught it by him in this episode—so the slave didn't *learn* it then either
- [C] And yet *will* know it through further questioning

Re [B]: S claims that his questions merely elicit the slave's opinions. S did use the elenctic method—he asks misleading questions sometimes; he gets the slave to claim knowledge and then to confess *aporia*; thereafter the slave gets it right by applying his own reasoning, not by bowing to S's authority.

Perhaps, then, [R] supports [E]. We need some explanation of why the slave, through his discussion with S, will reliably *reject* false beliefs and *accept* true beliefs. Perhaps S thinks this is possible because the slave (like everyone) once knew (in a disembodied state) but forgot, and hence can recognize the truth, and so reject the false.

Additional question: Even if we grant [A]-[C] do we have to think that the slave has recollected knowledge? What alternative explanations for the success of the slave's discussion might we consider?

The scope of recollection

What kinds of truths does S think we can recollect?

- He clearly allows geometrical truths (and so mathematical truths generally?). He should allow ethical truths (including truths about value) (otherwise the unity of the dialogue would be in jeopardy). He also suggests nature "as a whole"?—What could that mean?
- What about empirical truths?
